

year ending Sept. 30, 1981, and struck out subsec. (b) setting forth authorization of appropriations for grants.

CHAPTER 56A—GLOBAL CHANGE RESEARCH

Sec.

2921. Definitions.

SUBCHAPTER I—UNITED STATES GLOBAL CHANGE RESEARCH PROGRAM

2931. Findings and purpose.

(a) Findings.

(b) Purpose.

2932. Committee on Earth and Environmental Sciences.

(a) Establishment.

(b) Membership.

(c) Chairperson.

(d) Support personnel.

(e) Functions relative to global change.

2933. United States Global Change Research Program.

2934. National Global Change Research Plan.

(a) In general.

(b) Contents of Plan.

(c) Research elements.

(d) Information management.

(e) National Research Council evaluation.

(f) Public participation.

2935. Budget coordination.

(a) Committee guidance.

(b) Submission of reports with agency appropriations requests.

(c) Consideration in President's budget.

2936. Scientific assessment.

2937. Omitted.

2938. Relation to other authorities.

(a) National Climate Program research activities.

(b) Availability of research findings.

(c) Effect on Federal response actions.

SUBCHAPTER II—INTERNATIONAL COOPERATION IN GLOBAL CHANGE RESEARCH

2951. Findings and purposes.

(a) Findings.

(b) Purposes.

2952. International discussions.

(a) Global change research.

(b) Energy research.

2953. Global Change Research Information Office.

SUBCHAPTER III—GROWTH DECISION AID

2961. Study and decision aid.

(a) Study of consequences of community growth and development; decision aid to assist State and local authorities in managing development.

(b) Consultation with appropriate Federal departments and agencies.

(c) Report.

CHAPTER REFERRED TO IN OTHER SECTIONS

This chapter is referred to in title 42 section 13383.

§ 2921. Definitions

As used in this chapter, the term—

(1) “Committee” means the Committee on Earth and Environmental Sciences established under section 2932 of this title;

(2) “Council” means the Federal Coordinating Council on Science, Engineering, and Technology;

(3) “global change” means changes in the global environment (including alterations in climate, land productivity, oceans or other

water resources, atmospheric chemistry, and ecological systems) that may alter the capacity of the Earth to sustain life;

(4) “global change research” means study, monitoring, assessment, prediction, and information management activities to describe and understand—

(A) the interactive physical, chemical, and biological processes that regulate the total Earth system;

(B) the unique environment that the Earth provides for life;

(C) changes that are occurring in the Earth system; and

(D) the manner in which such system, environment, and changes are influenced by human actions;

(5) “Plan” means the National Global Change Research Plan developed under section 2934 of this title, or any revision thereof; and

(6) “Program” means the United States Global Change Research Program established under section 2933 of this title.

(Pub. L. 101-606, § 2, Nov. 16, 1990, 104 Stat. 3096.)

SHORT TITLE

Section 1 of Pub. L. 101-606 provided that: “This Act [enacting this chapter] may be cited as the ‘Global Change Research Act of 1990’.”

Section 201 of title II of Pub. L. 101-606 provided that: “This title [enacting subchapter II of this chapter] may be cited as the ‘International Cooperation in Global Change Research Act of 1990’.”

SUBCHAPTER I—UNITED STATES GLOBAL CHANGE RESEARCH PROGRAM

§ 2931. Findings and purpose

(a) Findings

The Congress makes the following findings:

(1) Industrial, agricultural, and other human activities, coupled with an expanding world population, are contributing to processes of global change that may significantly alter the Earth habitat within a few human generations.

(2) Such human-induced changes, in conjunction with natural fluctuations, may lead to significant global warming and thus alter world climate patterns and increase global sea levels. Over the next century, these consequences could adversely affect world agricultural and marine production, coastal habitability, biological diversity, human health, and global economic and social well-being.

(3) The release of chlorofluorocarbons and other stratospheric ozone-depleting substances is rapidly reducing the ability of the atmosphere to screen out harmful ultraviolet radiation, which could adversely affect human health and ecological systems.

(4) Development of effective policies to abate, mitigate, and cope with global change will rely on greatly improved scientific understanding of global environmental processes and on our ability to distinguish human-induced from natural global change.

(5) New developments in interdisciplinary Earth sciences, global observing systems, and computing technology make possible signifi-
